EDUCATION

San Jose State University

Aug 2022 - May 2026

Software Engineering, BS

San Jose, CA

Relevant Coursework: Discrete Mathematics, Software Engineering I & II, Data Structures and Algorithms, Assembly Programming, Calculus I, II, & III, Linear Algebra, Operating Systems, Computer Networks, Object Oriented Design, Information Security, Distributed Systems, Intro to AI

SKILLS

- **Tools:** Git, GitHub, VS Code, Bash, Docker, Zsh, Oracle Cloud, SSH, Unix
- **Languages/Frameworks:** Java, Python, JavaScript, Typescript, HTML, CSS, ReactJS, Flask, NodeJS, Tailwind CSS, Google Sheets API, Flutter
- **Technical:** Scrum, Jira, REST API, Object Oriented Programming (OOP)
- **Soft:** Communication, Problem Solving, Teamwork, Adaptability

PROJECTS

Human Activity Recognition | Python, HAR, pandas, scikit-learn August 2025 - December 2025

- Developed a deep learning model to classify physical user activities (e.g., walking, sitting, standing) using tri-axial accelerometer and gyroscope sensor data.
- Engineered a data preprocessing pipeline to normalize raw sensor signals and implement sliding window segmentation for time-series feature extraction.
- Trained and Evaluated a Neural Network that achieved high accuracy by optimizing hyperparameters and loss functions.
- Leveraged Python's data science stack to visualize signal patterns and identify key transition points in physical movement.
- <https://github.com/d2blepeace/CS156Project>

SpartanYap | React, Flask, Tailwind CSS, PostgreSQL, OAuth

March 2024 - May 2024

- Engineered a real-time social media platform enabling anonymous board-style messaging for community engagement.
- Architected secure authentication systems using JSON Web Tokens (JWT) to manage user sessions and protect sensitive data.
- Developed robust RESTful APIs with Flask to handle high-frequency data retrieval and storage within a PostgreSQL database.
- Containerized the application using Docker, streamlining the CI/CD pipeline and ensuring 100% environment consistency across development and production.
- Collaborated in an Agile environment, participating in daily stand-ups and sprint retrospectives to ensure iterative delivery of project milestones.
- <https://github.com/shallowsmith/SpartanYap>

StudySync | React, Express, Nodejs, MongoDB

August 2024 - December 2024

- Developed a collaborative networking platform for students to coordinate and schedule localized study sessions.
- Designed comprehensive system architecture diagrams, including Activity, State Transition, and Data Flow diagrams, to optimize workflow logic.
- Optimized data persistence by designing efficient MongoDB schemas and complex queries to manage user-generated content.
- Crafted a responsive, intuitive user interface utilizing React and Tailwind CSS for a seamless user experience.
